Pest Problem Solutions

Our IPM approach to pest control includes:

♦ Inspections

During each scheduled visit an inspection will be made to selected areas of your home. We will inspect for pest activity, entrance points, harborage areas, and any conditions that may contribute to a pest problem. Items found during inspections will be reported to you, along with our recommendations, on our Residential Inspection Report.

♦ Pest Monitoring

Monitoring of selected pests with the use of glue traps, when applicable, is included. This process helps us to locate and identify pests or potential pest problems. It also enables us to select the proper application technique, if needed, to treat for that pest.

♦ Pesticide Application

Pesticide applications needed to prevent, control, or eliminate specific unwanted target pests are included. It is our policy not to routinely apply pesticides. In fact, we often choose to use non-pesticide methods for pest reduction. When pesticides are needed, they along with the type of application technique, are carefully selected.

♦ Pest Proofing

Filling of minor cracks or openings along foundation and utility access points will be provided to prevent pest entry. Pest proofing plays an important role in successful Integrated Pest Management.

Residential Maintenance Plan

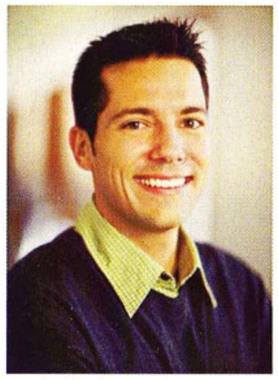
If you like the reassurance of keeping unwanted pests out of your home environment, and don't like using pesticides needlessly, our Residential Maintenance Plan may be right for you.

Service Frequency

Our Residential Maintenance Plan was designed to combat unwanted pest problems while fitting within your busy schedule. There will be two scheduled services performed. One in the Spring and one in the late Summer/early Fall.

Areas Include

All accessible areas within your home, as well as exterior surfaces of the house are included. We will rotate our service to various areas of your home at each visit depending on the specific need. For example, we may provide service for the exterior at one visit and provide service to the interior on another visit.



Testimonal

"Joslyn Pest Control services my home and store. We recommend them to all of our customers. Their service and quality of work is unsurpassed in the industry."

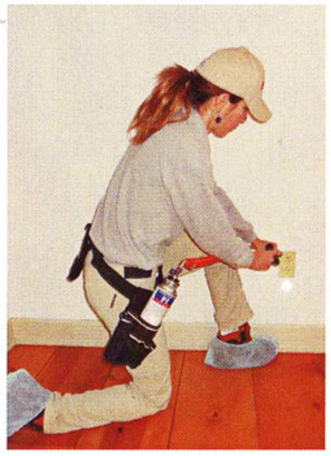
Robert Colucci
Owner of: Finger Lakes Pool & Spas - Canandaiuga, NY

Target Pests

This program covers basically all insects that will infest, feed, or reproduce within your home. Service for mice and rats is also included. Those pests not included within this program are termites, wood-boring beetles, and human parasites (such as lice). Some of the more common pests included are:

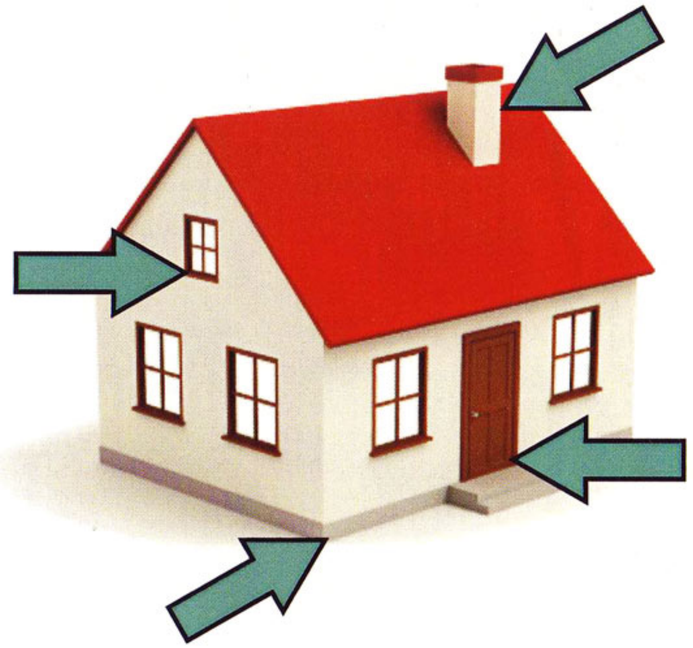
- Ants
- Fleas
- Mice
- Hornets
- Spiders
- Rats
- Cluster Flies
- Cockroaches
- Yellow Jackets
- Carpet Beetles
- Flour Beetles
- Carpenter Ants
- Ladybugs
- Wasps
- Centipedes
- Silverfish
- Millipedes
- Earwigs
- **AND MORE**

The Plan



Obviously your home is not plagued with all these pests - at least we hope it's not! During service visits, we will target certain pests that are more commonly found to be a problem within homes. We will be also place an emphasis on specific pests that may be pertinent for your home. For example, if you own a pet, then your concern may be fleas. Targeting helps our environment by using less pesticides, while giving you the benefit of a quality service unique to Joslyn Pest Control.

Targeted Solution To Meet Your Needs



Our Guarantee

Your complete satisfaction is our desire. If a target pest becomes a problem within your home, upon request, we will return between scheduled visits to provide an additional service for that pest at no extra charge. Additional service visits are limited to one (1) visit between normally scheduled visits with a maximum of four (4) additional visits per year. We also guarantee that a company owner will be at each visit, providing you with the best possible service in the industry.
